

1010 REVIEW I KEY

$$1. \frac{11x + 1.4}{-1.4} = -61.3 \Rightarrow \frac{11x}{11} = \frac{-62.7}{11} \Rightarrow x = -5.7$$

$$2. \frac{8x - 4}{-4x + 4} = \frac{4x - 28}{4x + 4} \Rightarrow \frac{4x}{4} = \frac{-24}{4} \Rightarrow x = -6$$

$$3. -8(k+1) - (-9k+1) = -5 \Rightarrow \cancel{-8k} + \cancel{8} + \cancel{9k} - \cancel{1} = -5 \Rightarrow k + 7 = -5 \Rightarrow k = -12$$

$$4. \frac{15}{5} \cdot \frac{15}{3} = \frac{19}{15} \Rightarrow \frac{3}{-3} - 5x = \frac{19}{-3} \Rightarrow \frac{-5x}{-5} = \frac{16}{-5} \Rightarrow x = -\frac{16}{5}$$

$$5. \frac{18}{2}(x+6) - \frac{18}{9}(x-9) = x + 3 \Rightarrow \cancel{-9(x+6)} - \cancel{2(x-9)} = 18x + 54 \Rightarrow \\ -9x - 54 - 2x + 18 = 18x + 54 \Rightarrow \cancel{-11x - 36} = \cancel{18x + 54} \Rightarrow \\ \frac{-90}{29} = \frac{29x}{29} \Rightarrow x = -\frac{90}{29}$$

$$6. \frac{1}{4}(8x-12) = 6\left(\frac{1}{3}x - \frac{1}{2}\right) + 9 \Rightarrow \cancel{2x - 3} = \cancel{2x - 3} + 9 \Rightarrow 0 = 9 \Rightarrow \boxed{0}$$

$$7. \text{Three times the sum of some number plus 2 is equal to 6 times the number minus 18.} \\ 3(x+2) = 6x - 18$$

$$\text{so } 3(x+2) = 6x - 18 \Rightarrow 3x + 6 = 6x - 18 \Rightarrow \cancel{3x + 6} - \cancel{3x + 6} = \frac{24}{3} \Rightarrow x = 8$$

Story problem \Rightarrow Story answer $\boxed{\text{The number is 8}}$

8. To increase a number by 70%, you multiply by 1.7.

Since we don't know what the population was, we will call it x .

$$\text{so } \frac{1.7x}{1.7} = \frac{31000}{1.7} \Rightarrow x = \boxed{18235 \text{ 5 years ago}}$$

$$9. F = \frac{9}{5}C + 32 \Rightarrow \frac{5}{9}(F-32) = \frac{9}{5}C \cdot \frac{5}{9} \Rightarrow C = \frac{5}{9}(F-32)$$

$$10. 4z - 4 \geq 3z - 9 \Rightarrow z \geq -5, [-5, \infty), \boxed{-5}$$

$$11. -7(y+1) \leq -9y - 7 \Rightarrow -7y - 7 \leq -9y - 7 \Rightarrow \frac{2y}{2} \leq \frac{0}{2} \Rightarrow y \leq 0$$

$\boxed{(-\infty, 0]}$

12. Let x = # of arrows you can buy, including those with the set.
 Now, let's look at the cost of buying arrows. we have to buy the set first, so we must purchase at least 3 arrows

#arrows	3	4	5	6	7	x
cost	62	$62+7$	$62+7 \cdot 2$	$62+7 \cdot 3$	$62+7 \cdot 4$	$62+7 \cdot (x-3)$

$\downarrow 5-3$ $\downarrow 6-3$ $\uparrow 7-3$

Next, since the total cost ≤ 132 , we get

$$62 + 7(x-3) \leq 132 \Rightarrow \frac{7(x-3)}{7} \leq \frac{70}{7} \Rightarrow x-3 \leq 10$$

$\Rightarrow x \leq 13$, so he can purchase $\boxed{13 \text{ arrows}}$

13. $A \cap B$ means A intersect B. \cap = intersect = AND = BOTH.
 so what numbers are BOTH in A AND B? $\boxed{\{47, 49, 50, 51\}}$

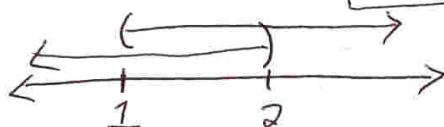

$$14. -6x > -12 \text{ and } x+6 > 7$$

$\downarrow -6 \quad \downarrow -6$

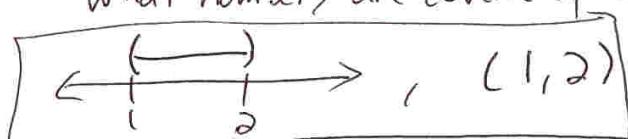

$$x < 2 \text{ and } x > 1$$

\leftarrow means left

$>$ is right

what numbers are covered by both lines?

15. $7 \leq 3t - 2 \leq 16$ $\Rightarrow \frac{9}{3} \leq \frac{3t}{3} \leq \frac{18}{3}$ $\Rightarrow 3 \leq t \leq 6$

$+2 \quad +2 \quad +2$

$\boxed{[3, 6]}$

16. \cup means OR means Union, so what numbers are in one set OR the other OR Both? $\boxed{\{55, 57, 58, 59, 60, 62\}}$

17. $9x - 6 < 3x$ or $\frac{-3x \leq -9}{-3 \quad | \quad -3}$

$\frac{6x < 6}{6} \quad x \geq 3$

$x < 1$

$\boxed{(-\infty, 1) \cup [3, \infty)}$

what numbers are covered by one line or the other or both?

NOTICE THE OR ANSWER can have the \cup symbol.

18. $|6x+7| + 8 = 11$ $\Rightarrow |6x+7| = 3$

$\frac{-8 \quad -8}{6x+7 = 3 \quad \text{or} \quad 6x+7 = -3}$

$\frac{6x = -4}{6} \quad \frac{6x = -10}{6}$

$\boxed{x = -\frac{2}{3} \quad \text{or} \quad x = -\frac{5}{3}}$

1st, always isolate the ABSOLUTE VALUE!

2nd, always check your answers with ABSOLUTE VALUE EQUATIONS!

check:

$$|6(-\frac{2}{3})+7| + 8 = |-4+7| + 8 = |3| + 8 = 3 + 8 = 11 \quad \checkmark$$

$$|6(-\frac{5}{3})+7| + 8 = |-10+7| + 8 = |-3| + 8 = 3 + 8 = 11 \quad \checkmark$$

19. $|9x - 5| = 0$

$9x - 5 = 0$ $9x - 5 = -0$

$+5 \quad +5 \quad +5 \quad +5$

$\frac{9x}{9} = \frac{5}{9} \quad \frac{9x}{9} = \frac{5}{9}$

$\boxed{x = \frac{5}{9}}$

check: $|9(\frac{5}{9}) - 5| = |5 - 5| = |0| = 0 \quad \checkmark$

20. $|5x - 8| = |x - 3|$

$$5x - 8 = x - 3 \quad \text{or} \quad 5x - 8 = -(x - 3)$$

$$-x + 8 \quad -x + 8 \quad +x + 8 \quad +x + 8$$

$$\frac{4x}{4} = \frac{5}{4} \quad \text{or} \quad \frac{6x}{6} = \frac{11}{6}$$

$$x = \frac{5}{4} \quad \boxed{x = \frac{5}{4}} \quad \text{or} \quad x = \frac{11}{6} \quad \boxed{x = \frac{11}{6}}$$

Check

$$|5\left(\frac{5}{4}\right) - 8| = \left|\frac{5}{4} - 3\right| \Rightarrow \left|\frac{25}{4} - \frac{32}{4}\right| = \left|\frac{5}{4} - \frac{12}{4}\right|$$

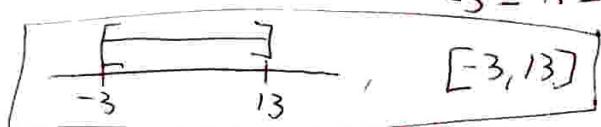

$$\Rightarrow \left|\frac{-8}{4}\right| = \left|\frac{-8}{4}\right| \quad \checkmark$$

$$|5\left(\frac{11}{6}\right) - 8| = \left|\frac{11}{6} - 3\right| \Rightarrow \left|\frac{55}{6} - \frac{48}{6}\right| = \left|\frac{11}{6} - \frac{18}{6}\right|$$

$$\Rightarrow \left|\frac{7}{6}\right| = \left|\frac{-7}{6}\right| \quad \checkmark$$

21. $|x - 5| - 4 \leq 4$ $\Rightarrow |x - 5| \leq 8$

$$\begin{array}{c} -8 \leq x - 5 \leq 8 \\ +5 \quad +5 \quad +5 \\ -3 \leq x \leq 13 \end{array}$$

This is an And problem

\leq Less Than

the condensed inequality
is the fastest

22. $|5k - 5| > -3$ When is a nonnegative number > -3 ?
Always

$$\boxed{(-\infty, \infty)}$$

OR

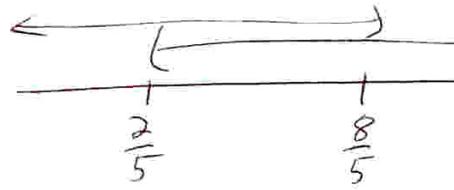

$>$ is an OR problem Greater

so $5k - 5 > -3$ OR $5k - 5 < 3$

$$\frac{5k}{5} > \frac{2}{5} \quad \frac{5k}{5} < \frac{8}{5}$$

$$k > \frac{2}{5} \quad \text{or}$$

$$k < \frac{8}{5}$$

what's covered by
one line or the other
or both? Everything

$$\boxed{(-\infty, \infty)}$$

$$23. |3k+5| - 2 > 4 \Rightarrow |3k+5| > 6 \quad > \text{Great "OR"}$$

$$3k+5 > 6 \quad \text{OR} \quad 3k+5 < -6$$

$$\frac{3k}{3} > \frac{1}{3} \quad \frac{3k}{3} < -\frac{11}{3}$$

$$k > \frac{1}{3} \quad \text{or} \quad k < -\frac{11}{3}$$
